

custom LED optics for any and all applications

street lighting

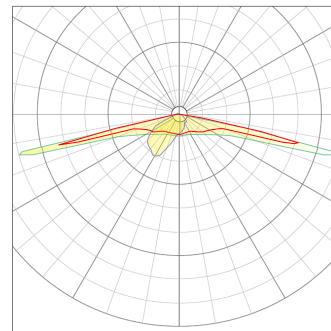

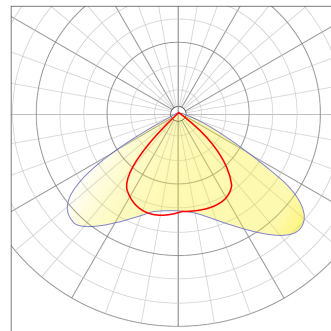

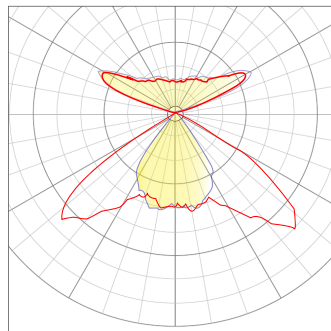

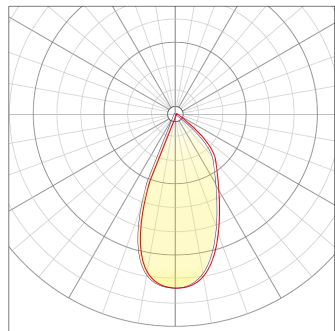

bollard lighting

task lighting

custom LED optics custom beam patterns

custom LED optics

Using the latest ray tracing software our optics engineers simulate light distribution in illumination whilst analysing candela distributions, optical efficiency, luminance, radiance, and uniformity. The software allows for accurate performance and aesthetic predictions of the finished product – resulting in fewer costly prototypes and reducing time to market.

Using bespoke toolsets we'll design and manufacture your optic for LEDs from any manufacturer, for any purpose.

Speak to our team today to discuss your requirements and get your hands on a completely custom optic.
